

Add power to your email!

The LetterMark® system adds branding, web-integration and enhanced contact information to your daily email.

(Before)

(After)

The brain of the LetterMark system is a small but powerful client software that resides on the user's PC. The client software works in concert with the LetterMark servers to deliver enhanced functionality to your email.

The LetterMark servers are hosted with Hosted Solutions. As a result, the hosting solution for the LetterMark system meets or exceeds the uptime and the protection standards of any corporate hosting environment, or third party hosting service.

RELIABILITY

Hosted Solution's network infrastructure uses the industry's leading hardware and partners with multiple Tier-1 and local providers to build a carrier neutral and highly redundant solution. Their network redundancy ensures that traffic routes to the optimal available path with the shortest number of hops, which results in improved performance and the elimination of downtime.

SECURITY

A secure facility is the foundation upon which reliable services are built. From firewall management to continuous network, hardware and application monitoring, Hosted Solutions provides a range of services to ensure that the LetterMark system is secure and available (see sidebar).

The contents of your email are secure too. The LetterMark system does not alter or impact the routing of email. When the recipient opens a LetterMark email, the template (header graphic and virtual business card) is downloaded from our data center. In the unlikely event the LetterMark servers are inaccessible, the text of the email will still reach the recipient. Only the LetterMark template will be unavailable.

DATA CENTER CAPABILITIES

- Continuously available power through redundant UPS systems and diesel generators
- Consistent environmental controls through redundant HVAC systems
- Raised floors and early warning fire detection systems
- Closed-circuit television cameras recording all data center activity
- Multiple security checkpoints to gain access to data center
- Private Peering Relationships with Time Warner, AT&T, Level 3 Communications
- Diverse Local Loop SONET entrances
- Fully redundant switch routers
- Redundant Point-to-Point circuits between data centers
- Ballistic rated exterior; designed to withstand hurricane force winds
- Fully managed firewall platforms
- Proprietary operational support system, Dashboard, automates processes and ensures responsiveness and reliability

About Hosted Solutions.

Hosted Solutions provides complete and customized managed and dedicated web hosting solutions to more than 275 clients. Hosted Solutions data centers ensure optimal uptime with a 2N+1 power infrastructure, 2N+1 environmental controls (HVAC) and a diversified network design. Aggregate Bandwidth to the internet is 2.3GB.
